

Provide compliance & EU-GDPR compliant systems

On-Premises. Hybrid. Cloud.

Libelle DataMasking

Provide departments, external developers and consultants with anonymized test and evaluation systems containing realistic data.

For all kinds of applications

Templates for SAP® R/3® and SAP S/4HANA®, Dynamics and many more

For all structured Data

Very fast execution

„GDPR and compliance also for combined SAP, Dynamics and legacy landscapes. A solution for the entire logic chain“

[Head of IT, retail group]

Anonymize personal and sensitive data in both SAP® and Non-SAP systems - Libelle **DataMasking**

Ensuring the confidentiality and integrity of data is the best way to protect data. The development of a non-production system (e.g. for development, training, evaluation) frequently poses challenges for the IT department: On the one hand, this system should run with realistic data for meaningful use, on the other, no real data should be used. Libelle **DataMasking** helps you to get out of this dilemma.

What do users appreciate most?

Realistic (non-real) target data supports realistic (real) testing

Depending on the information type, the anonymization bases on reference data as well as standardized or customer-specific calculations, respecting logical dependencies, etc. The anonymized system provides real-looking data and logical consistency.

Logical consistency across the entire process chain

Anonymization not only in individual systems, but also in the system network. The holistic approach anonymizes the individual data objects in all connected environments in an identical and consistent manner.

One solution for all types of structured data

All common RDBMS, from MySQL to Oracle to the HANA database and other are supported. Furthermore, data of file-based data stores such as Excel or CSV files.

Data protection regulation (GDPR) compliant and individually adaptable templates

Best Practices templates for SAP® R/3® and SAP S/4HANA® systems are available, as are Microsoft Dynamics NAV and other environments.
