Ensure smooth IDoc Workflows - Libelle EDIMON

IDocs (Intermediate Document) are an essential component for the execution of business processes. As a consequence, a smooth IDoc workflow is indispensable. Automating this workflow increases process reliability tremendously. Time-consuming routine tasks are accelerated and greatly simplified. The SAP basis is relieved. Corrections can be carried out directly by the department. Thus they have clarity at all times, due to the responsibility for their own processes.

What do users appreciate most?

Immediate reaction to known and unknown types of errors.

Automated correction for new error types. Or at least sending of notifications. This, of course, also for new error types.

Direct involvement of departments

Return or forward IDocs, e.g. to the sending departments, for manual correction, depending on the type of error and the origin of the IDoc.

Single corrections and mass changes

If manual correction is required: optimized input masks for SAP Basis and the business departments as well as options for mass export/import.

Solution notes and knowledge management

In case of sporadic errors without automated correction, use manual solution hints in the form of context-available notes.
